

Customer Testimonial

Company:	Consolidated Metco	
Industry:	Parts Manufacturer (Trucking)	
Chemicals/Solvents:	Acetone, butyl acetate, isopropyl acetate, ethylene glycol mono butyl ether	
Chemical Volume:	12,000 gallons per year	
Onsite Equipment:	A40	
Annual Savings:	\$50,000 - \$72,000	
Waste Reduction:	80%	

Application Profile

Consolidated Metco uses a high-end solvent for purging lines in its two-booth painting operation. They currently purchase approximately 12,000 gallons of line purge per year. Annualized savings on chemical purchases will exceed \$50,000. Additional savings are being realized by reducing waste by 80%.

This is the second Consolidated Metco facility to implement the CleanPlanet solvent recovery program (similar benefits are being recognized at the company's other North Carolina facility), and CleanPlanet is currently conducting a needs assessment for a third facility in Mexico.

"We are presently recovering 70-80% of our spent solvent and expect our annual savings to exceed \$50,000."

- Systems Coordinator and EHS Manager

"Clean Planet went the extra mile to make sure that everything was pre-planned before arriving onsite. The period from their arrival to the point where we were recovering solvent was less than 24 hours. The operational training was simple and we've not had any issues since they installed the equipment. Operating the machine only requires a few minutes per day. We are presently recovering 70-80% of our spent solvent and expect our annual savings to exceed \$50,000."

- Chris Styles, Systems Coordinator and EHS Manager
